Vcarddav Working Group Meeting
IETF-76, Hiroshima

2009-11-12

Status Update

- Since Stockholm (from -08 to -09):
  - 0 issues have been opened
  - 2 issues have been closed
- Currently:
  - 0 issues are being considered for closure
  - 0 issue is being discussed
  - **Are we done?**

Major Changes (1/2)

- Reverted changes to groups.
    - Removed the "work" and "home" groups.
    - Removed the groups registry.
    - Re-introduced the "work" and "home" TYPE prameter values.
    - Applied the TYPE parameter to properties which supported the "work" and "home" groups.
- Vendor namespace now uses private enterprise number in property name prefix.

Major Changes (2/2)

- Added "thing" value for KIND property.
    - How is it semantically different from "individual"?
    - "resource" was also requested...

- TZ can now be reset to a utc-offset value.
    - "Note that utc-offset values SHOULD NOT be used because the UTC offset varies with time - not just because of the usual DST shifts that occur in may regions, but often entire regions will "re-base" their offset entirely. The actual offset may be +/- 1 hour (or perhaps a little more) than the one given."

- For -10, add given name field to SORT-STRING.
    - This is backward compatible! Wow!

Proposal

- Put the "XML" property in vCard 4.0 base draft.
    - Value type: text
    - No parameters.
    - Cardinality: (0,n)
- Refer to vCard XML draft for value syntax.
- Support for XML is optional.
    - XML doc makes it required.

```
XML:...opaque content...
```

Next Steps

- Minor editorial fixes needed.

- WGLC in sight?

This is the last slide.
